1 Document Information

Release Note	Show all the revision history about specific BSP.
Driver Reference Guide	Describe the definition, input and output of each API.

2 Library Information

CMSIS	CMSIS definitions by ARM® Corp.
Device	CMSIS compliant device header file.
StdDriver	All peripheral driver header and source files.

3 Sampel Code Information

\SampleCode\CardReader	CCID ^[1] Smart Card reader Sample Code.
\SampleCode\Hard_Fault_ Sample	Show hard fault information when hard fault happened.
\SampleCode\ISP	Sample codes for In-System-Programming.
\SampleCode\Template	Software Development Template.
\SampleCode\Semihost	Show how to debug with semi-host message print.
\SampleCode\RegBased	The sample codes which access control registers directly.
\SampleCode\StdDriver	NUC100 Series Driver Samples

^{1.} Circuit card interface device (CCID) is USB device that interface with integrated circuit cards.

4 \SampleCode\ISP

ISP_DFU	In-System-Programming Sample code through USB interface and following Device Firmware Upgrade Class Specification.
ISP_HID	In-System-Programming Sample code through USB HID interface.
ISP_I2C	In-System-Programming Sample code through I2C interface.
ISP_RS485	In-System-Programming Sample code through RS485 interface.
ISP_SPI	In-System-Programming Sample code through SPI interface.
ISP_UART	In-System-Programming Sample code through UART interface.

5 \SampleCode\RegBased

ACMP	Demonstrate how ACMP ^[1] works with internal band-gap voltage.
ACMP_Wakeup	Show how to wake up MCU from Power-down mode by ACMP wake-up function.
ADC_ContinuousScanMode	Perform A/D Conversion with ADC continuous scan mode.
ADC_MeasureAVDD	Measure AVDD voltage by ADC.
ADC_PwmTrigger	Demonstrate how to trigger ADC by PWM.
ADC_ResultMonitor	Monitor the conversion result of channel 2 by the digital compare function.
ADC_SingleCycleScanMode	Perform A/D Conversion with ADC single cycle scan mode.
ADC_SingleMode	Perform A/D Conversion with ADC single mode.
CRC_8	Implement CRC in CRC-8 mode and get the CRC checksum result.
CRC_CCITT	Implement CRC in CRC-CCITT mode and get the CRC checksum result.
FMC_IAP	Show how to call LDROM functions from APROM. The code in APROM will look up the table at 0x100E00 to get the address of function of LDROM and call the function.
FMC_MultiBoot_SwReset	Show how to use software reset to implement multi-boot system to boot from different applications in APROM.
FMC_RW	Show how to read/program embedded flash by ISP function.
GPIO_EINTAndDebounce	Show the usage of GPIO external interrupt function and debounce function.
GPIO_INT	Show the usage of GPIO interrupt function.
GPIO_OutputInput	Show how to set GPIO pin mode and use pin data input/output control.

GPIO_PowerDown	Show how to wake up system from Power-down mode by GPIO interrupt.
I2C_EEPROM	Show how to use I ² C interface to access EEPROM.
I2C_GCMode_Master	Show how a Master uses I ² C address 0x0 to write data to Slave. This sample code needs to work with I2C_GCMode_Slave.
I2C_GCMode_Slave	Show a Slave how to receive data from Master in GC (General Call) mode. This sample code needs to work with I2C_GCMode_Master.
I2C_Master	Show a I ² C Master how to access Slave. This sample code needs to work with I2C_Slave.
I2C_Slave	Show how to set I ² C in Slave mode and receive the data from Master. This sample code needs to work with I2C_Master.
I2C_Wakeup_Master	Show how to wake up MCU from Power-down. This sample code needs to work with I2C_Wakeup_Slave.
I2C_Wakeup_Slave	Show how to wake up MCU from Power-down mode through I ² C interface. This sample code needs to work with I2C_Wakeup_Master.
I2S_Master	Configure I ² S as Master mode and demonstrate how I ² S works in Master mode. This sample code needs to work with I2S_Slave sample code.
I2S_PDMA	Demonstrate how I2S works with PDMA in Master mode. Both TX PDMA function and RX PDMA function will be enabled.
I2S_Slave	Configure I ² S as Slave mode and demonstrate how I ² S works in Slave mode. This sample code needs to work with I2S_Master sample code.
PDMA	Use PDMA channel 6 to transfer data from memory to memory.
PS2	Demonstrate how to emulate a PS/2 mouse by moving mouse pointer when connecting to PC by PS/2 interface.

PWM_DeadZone Demonstrate how to use PWM Dead Zone function. PWM_DoubleBuffer Change duty cycle and period of output waveform by PWM Double Buffer function. RTC_PowerDown Use RTC alarm interrupt event to wake-up system. RTC_TimeAndTick Get the current RTC data/time per tick. Implement SPI Master loop back transfer. This sample code needs to connect SPIO_MISO0 pin and SPIO_MOSI0 pin together. It will compare the received data with transmitted data. Configure SPI0 as Master mode and demonstrate how to communicate with an off-chip SPI Slave device with FIFO mode. This sample code needs to work with SPI_SlaveFifoMode sample code. Demonstrate SPI data transfer with PDMA. SPI0 will be configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA function will be enabled. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. SYS Change system clock to different PLL frequency and output system clock from CLKO pin. IMBER_Capture Implement timer1 event counter function to count the external input event. Implement timer1 event counter function to count the external input event. IMBER_PowerDown Use timer0 toggle-output time-out interrupt event to wake		
PWM_DoubleBuffer Change duty cycle and period of output waveform by PWM Double Buffer function. RTC_PowerDown Use RTC alarm interrupt event to wake-up system. RTC_TimeAndTick Get the current RTC data/time per tick. Implement SPI Master loop back transfer. This sample code needs to connect SPI0_MISO0 pin and SPI0_MOSI0 pin together. It will compare the received data with transmitted data. Configure SPI0 as Master mode and demonstrate how to communicate with an off-chip SPI Slave device with FIFO mode. This sample code needs to work with SPI_SlaveFifoMode sample code. Demonstrate SPI data transfer with PDMA. SPI0 will be configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA function will be enabled. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. Change system clock to different PLL frequency and output system clock from CLKO pin. TIMER_Capture Implement timer1 event counter function to count the external input event. Implement timer counting in periodic mode.	PWM_Capture	· ·
Double Buffer function. RTC_PowerDown Use RTC alarm interrupt event to wake-up system. RTC_TimeAndTick Get the current RTC data/time per tick. Implement SPI Master loop back transfer. This sample code needs to connect SPI0_MISO0 pin and SPI0_MOSI0 pin together. It will compare the received data with transmitted data. SPI_MasterFifoMode Configure SPI0 as Master mode and demonstrate how to communicate with an off-chip SPI Slave device with FIFO mode. This sample code needs to work with SPI_SlaveFifoMode sample code. Demonstrate SPI data transfer with PDMA. SPI0 will be configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA function will be enabled. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. SYS Change system clock to different PLL frequency and output system clock from CLKO pin. TIMER_Capture Implement timer1 event counter function to capture timer2 counter value. Implement timer1 event counter function to count the external input event. TIMER_PeriodicINT Implement timer counting in periodic mode.	PWM_DeadZone	Demonstrate how to use PWM Dead Zone function.
RTC_TimeAndTick Get the current RTC data/time per tick. Implement SPI Master loop back transfer. This sample code needs to connect SPI0_MISO0 pin and SPI0_MOSI0 pin together. It will compare the received data with transmitted data. Configure SPI0 as Master mode and demonstrate how to communicate with an off-chip SPI Slave device with FIFO mode. This sample code needs to work with SPI_SlaveFifoMode sample code. Demonstrate SPI data transfer with PDMA. SPI0 will be configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA function will be enabled. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. SYS Change system clock to different PLL frequency and output system clock from CLKO pin. TIMER_Capture Implement timer1 event counter function to capture timer2 counter value. Implement timer1 event counter function to count the external input event. TIMER_PeriodicINT Implement timer counting in periodic mode.	PWM_DoubleBuffer	
Implement SPI Master loop back transfer. This sample code needs to connect SPI0_MISO0 pin and SPI0_MOSI0 pin together. It will compare the received data with transmitted data. Configure SPI0 as Master mode and demonstrate how to communicate with an off-chip SPI Slave device with FIFO mode. This sample code needs to work with SPI_SlaveFifoMode sample code. Demonstrate SPI data transfer with PDMA. SPI0 will be configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA function will be enabled. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. SYS	RTC_PowerDown	Use RTC alarm interrupt event to wake-up system.
SPI_Loopback code needs to connect SPI0_MISO0 pin and SPI0_MOSI0 pin together. It will compare the received data with transmitted data. Configure SPI0 as Master mode and demonstrate how to communicate with an off-chip SPI Slave device with FIFO mode. This sample code needs to work with SPI_SlaveFifoMode sample code. Demonstrate SPI data transfer with PDMA. SPI0 will be configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA function will be enabled. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. SYS Change system clock to different PLL frequency and output system clock from CLKO pin. TIMER_Capture Implement timer1 event counter function to count the external input event. TIMER_PeriodicINT Implement timer counting in periodic mode.	RTC_TimeAndTick	Get the current RTC data/time per tick.
SPI_MasterFifoMode communicate with an off-chip SPI Slave device with FIFO mode. This sample code needs to work with SPI_SlaveFifoMode sample code. Demonstrate SPI data transfer with PDMA. SPI0 will be configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA function will be enabled. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. Change system clock to different PLL frequency and output system clock from CLKO pin. TIMER_Capture Implement timer1 event counter function to capture timer2 counter value. Implement timer1 event counter function to count the external input event. TIMER_PeriodicINT Implement timer counting in periodic mode.	SPI_Loopback	code needs to connect SPI0_MISO0 pin and SPI0_MOSI0 pin together. It will compare the received data with
SPI_PDMA_Loopback configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA function will be enabled. Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. Change system clock to different PLL frequency and output system clock from CLKO pin. TIMER_Capture Show how to use the timer2 capture function to capture timer2 counter value. Implement timer1 event counter function to count the external input event. TIMER_PeriodicINT Implement timer counting in periodic mode.	SPI_MasterFifoMode	communicate with an off-chip SPI Slave device with FIFO mode. This sample code needs to work with
SPI_SlaveFifoMode communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code. Change system clock to different PLL frequency and output system clock from CLKO pin. Show how to use the timer2 capture function to capture timer2 counter value. Implement timer1 event counter function to count the external input event. TIMER_PeriodicINT Implement timer counting in periodic mode.	SPI_PDMA_Loopback	configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA
system clock from CLKO pin. Show how to use the timer2 capture function to capture timer2 counter value. Implement timer1 event counter function to count the external input event. Implement timer counting in periodic mode.	SPI_SlaveFifoMode	communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with
TIMER_Counter timer2 counter value. Implement timer1 event counter function to count the external input event. TIMER_PeriodicINT Implement timer counting in periodic mode.	sys	
TIMER_PeriodicINT	TIMER_Capture	·
TIMED D	TIMER_Counter	·
TIMER_PowerDown Use timer0 toggle-output time-out interrupt event to wake	TIMER_PeriodicINT	Implement timer counting in periodic mode.
Coo minor to gg. o output mino out into the remaining	TIMER_PowerDown	Use timer0 toggle-output time-out interrupt event to wake

	up system.
UART_Autoflow_Master	Transmit and receive data with auto flow control. This sample code needs to work with UART_Autoflow_Slave.
UART_Autoflow_Slave	Transmit and receive data with auto flow control. This sample code needs to work with UART_Autoflow_Master.
UART_IrDA_Master	Transmit and receive data in UART IrDA mode. This sample code needs to work with UART_IrDA_Slave.
UART_IrDA_Slave	Transmit and receive data in UART IrDA mode. This sample code needs to work with UART_IrDA_Master.
UART_LIN	Transmit LIN Frame including header and response in UART LIN mode.
UART_RS485_Master	Transmit and receive data in UART RS485 mode. This sample code needs to work with UART_RS485_Slave.
UART_RS485_Slave	Transmit and receive data in UART RS485 mode. This sample code needs to work with UART_RS485_Master.
UART_TxRx_Function	Transmit and receive data from PC terminal through RS232 interface.
UART_Wakeup	Show how to wake up system form Power-down mode by UART interrupt.
WDT_PowerDown	Use WDT time-out interrupt event to wake-up system.
WDT_TimeoutINT	Implement periodic WDT time-out interrupt event.
WDT_TimeoutReset	Show how to generate time-out reset system event while WDT time-out reset delay period expired.
WWDT_CompareINT	Show how to reload the WWDT counter value.

^{1.} Analog Comparator (ACMP).

6 \SampleCode\StdDriver

ACMP	Demonstrate how ACMP works with internal band-gap voltage.
ACMP_Wakeup	Show how to wake up MCU from Power-down mode by ACMP wake-up function.
ADC_ContinuousScanMode	Perform A/D Conversion with ADC continuous scan mode.
ADC_MeasureAVDD	Measure AVDD voltage by ADC.
ADC_PwmTrigger	Demonstrate how to trigger ADC by PWM.
ADC_ResultMonitor	Monitor the conversion result of channel 2 by the digital compare function.
ADC_SingleCycleScanMode	Perform A/D Conversion with ADC single cycle scan mode.
ADC_SingleMode	Perform A/D Conversion with ADC single mode.
CRC_8	Implement CRC in CRC-8 mode and get the CRC checksum result.
CRC_CCITT	Implement CRC in CRC-CCITT mode and get the CRC checksum result.
FMC_IAP	Show how to call LDROM functions from APROM. The code in APROM will look up the table at 0x100E00 to get the address of function of LDROM and call the function.
FMC_RW	Show how to read/program embedded flash by ISP function.
GPIO_EINTAndDebounce	Show the usage of GPIO external interrupt function and de-bounce function.
GPIO_INT	Show the usage of GPIO interrupt function.
GPIO_OutputInput	Show how to set GPIO pin mode and use pin data input/output control.

GPIO_PowerDown	Show how to wake up system from Power-down mode by GPIO interrupt.
I2C_EEPROM	Show how to use I ² C interface to access EEPROM.
I2C_GCMode_Master	Show how a Master uses I ² C address 0x0 to write data to Slave. This sample code needs to work with I2C_GCMode_Slave.
I2C_GCMode_Slave	Show a Slave how to receive data from Master in GC (General Call) mode. This sample code needs to work with I2C_GCMode_Master.
I2C_Master	Show a I ² C Master how to access Slave. This sample code needs to work with I2C_Slave.
I2C_Slave	Show how to set I ² C in Slave mode and receive the data from Master. This sample code needs to work with I2C_Master.
I2C_Wakeup_Master	Show how to wake up MCU from Power-down. This sample code needs to work with I2C_Wakeup_Slave.
I2C_Wakeup_Slave	Show how to wake up MCU from Power-down mode through I ² C interface. This sample code needs to work with I2C_Wakeup_Master.
I2S_Master	Configure I ² S as Master mode and demonstrate how I ² S works in Master mode. This sample code needs to work with I2S_Slave sample code.
I2S_PDMA	Demonstrate how I2S works with PDMA in Master mode. Both TX PDMA function and RX PDMA function will be enabled.
I2S_Slave	Configure I ² S as Slave mode and demonstrate how I ² S works in Slave mode. This sample code needs to work with I2S_Master sample code.
PDMA	Use PDMA channel 6 to transfer data from memory to memory.
PS2	Demonstrate how to emulate a PS/2 mouse by moving mouse pointer when connecting to PC by PS/2 interface.

PWM_Capture	Capture the PWMB Channel 1 waveform by PWMB Channel 2.
PWM_DeadZone	Demonstrate how to use PWM Dead Zone function.
PWM_DoubleBuffer	Change duty cycle and period of output waveform by PWM Double Buffer function.
RTC_PowerDown	Use RTC alarm interrupt event to wake-up system.
RTC_TimeAndTick	Get the current RTC data/time per tick.
SC_ReadATR	Read the smartcard ATR from smartcard 0 interface.
SPI_Loopback	Implement SPI Master loop back transfer. This sample code needs to connect SPI0_MISO0 pin and SPI0_MOSI0 pin together. It will compare the received data with transmitted data.
SPI_MasterFifoMode	Configure SPI0 as Master mode and demonstrate how to communicate with an off-chip SPI Slave device with FIFO mode. This sample code needs to work with SPI_SlaveFifoMode sample code.
SPI_PDMA_Loopback	Demonstrate SPI data transfer with PDMA. SPI0 will be configured as Master mode and SPI1 will be configured as Slave mode. Both TX PDMA function and RX PDMA function will be enabled.
SPI_SlaveFifoMode	Configure SPI0 as Slave mode and demonstrate how to communicate with an off-chip SPI Master device with FIFO mode. This sample code needs to work with SPI_MasterFifoMode sample code.
sys	Change system clock to different PLL frequency and output system clock from CLKO pin
TIMER_Capture	Show how to use the timer2 capture function to capture timer2 counter value.
TIMER_Counter	Implement timer1 event counter function to count the external input event.
TIMER_PeriodicINT	Implement timer counting in periodic mode.

TIMER_PowerDown	Use timer-0 toggle-output interrupt event to wake-up system.
UART_Autoflow_Master	Transmit and receive data with auto flow control. This sample code needs to work with UART_Autoflow_Slave.
UART_Autoflow_Slave	Transmit and receive data with auto flow control. This sample code needs to work with UART_Autoflow_Master.
UART_IrDA_Master	Transmit and receive data in UART IrDA mode. This sample code needs to work with UART_IrDA_Slave.
UART_IrDA_Slave	Transmit and receive data in UART IrDA mode. This sample code needs to work with UART_IrDA_Master.
UART_LIN	Transmit LIN Frame including header and response in UART LIN mode.
UART_RS485_Master	Transmit and receive data in UART RS485 mode. This sample code needs to work with UART_RS485_Slave.
UART_RS485_Slave	Transmit and receive data in UART RS485 mode. This sample code needs to work with UART_RS485_Master.
UART_TxRx_Function	Transmit and receive data from PC terminal through RS232 interface.
UART_Wakeup	Show how to wake up system form Power-down mode by UART interrupt.
USBD_Audio_NAU8822	Demonstrate how to implement a USB audio class device. NAU8822 is used in this sample code to play the audio data from Host. It also supports to record data from NAU8822 to Host.
USBD_HID_Keyboard	Show how to implement a USB keyboard device. This sample code supports to use GPIO to simulate key input.

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.

Please note that all data and specifications are subject to change without notice.

All the trademarks of products and companies mentioned in this datasheet belong to their respective owners
